

KHAAD BHARAT

Biochar Awareness Initiative for Indian Farmers

Unlock Better Soil. Better Harvest. Better Future.

A 100% natural solution to improve soil health, increase crop yield, and sequester carbon in your fields.

What is Biochar?

Biochar is a stable, carbon-rich form of charcoal made from agricultural waste and crop residues through a natural process called pyrolysis.

When mixed into soil, biochar:

✓ Retains water & nutrients	✓ Improves soil structure
✓ Reduces fertilizer needs	✓ Stores carbon for 100+ years

See the Difference

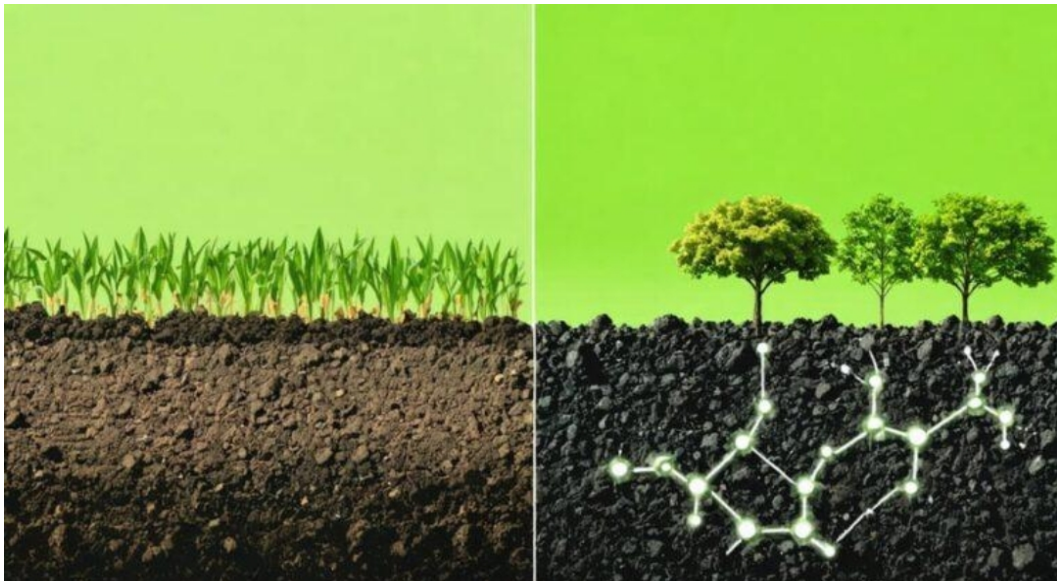

Plants grown with biochar show measurable improvements in health and yield

Key Benefits:

Larger, greener leaves with 30% higher yields • More vitamin C & sugar content • Stronger stems that withstand weather • Deeper, healthier root systems

Healthy Soil = Healthy Crops

Without Biochar	With Biochar
• Compacted, hard soil • Poor water retention • Nutrients wash away • Limited beneficial microbes	• Better soil structure & aeration • Water stays longer in soil • Nutrients available to roots • Thriving microbial communities

How Biochar is Made

From Waste to Wealth: The Pyrolysis Process

Step 1: Collect

Agricultural waste, crop residues, and biomass are collected

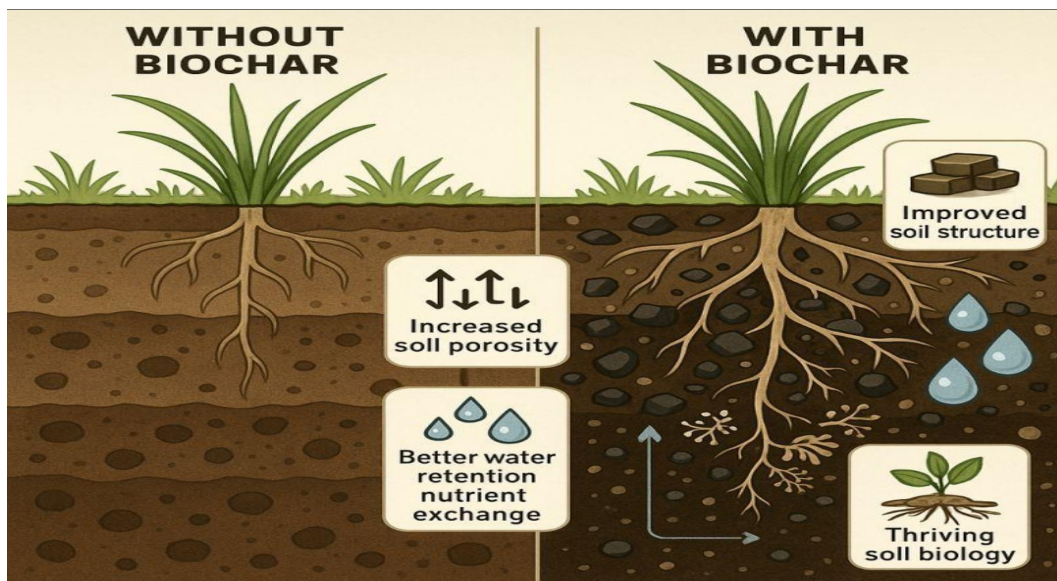

Step 2: Heat (600°C)

Biomass is heated in a low-oxygen environment (pyrolysis)

Step 3: Result

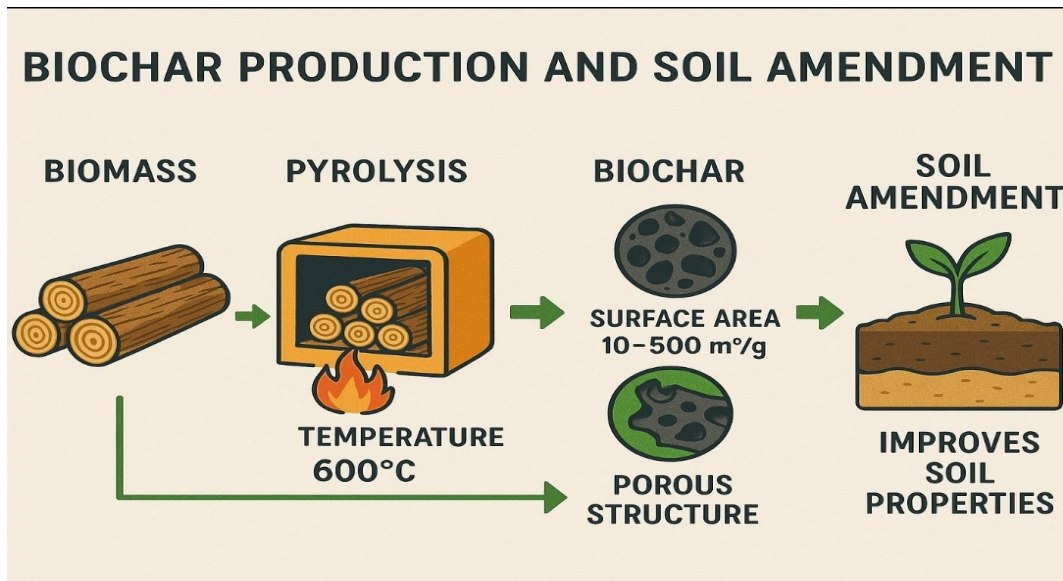

Stable biochar is produced, ready to amend soil

Real Results from Indian Farmers

- ✓ Improved crop health and nutrition
- ✓ Higher market prices for quality produce
 - ✓ Reduced water requirements
- ✓ Lower dependency on chemical inputs

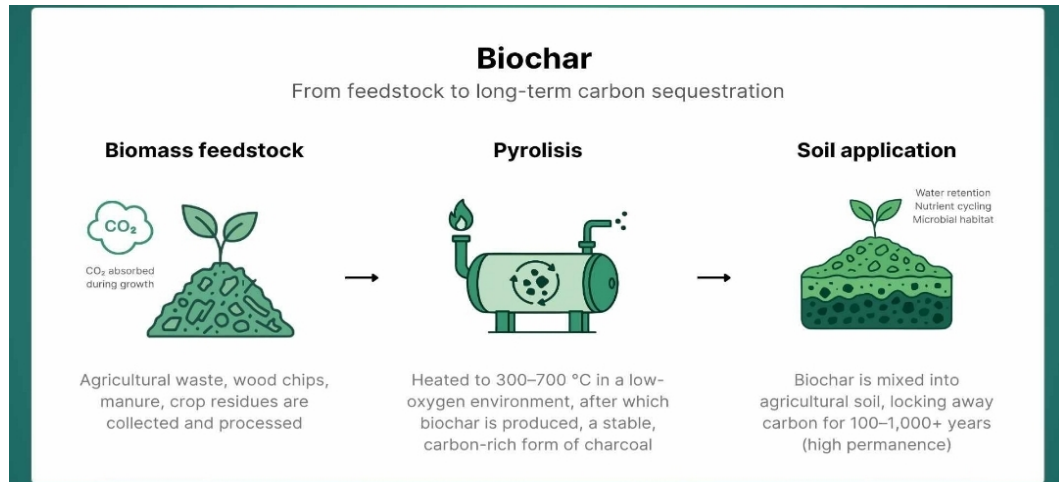

How to Use Biochar in Your Fields

1. PREPARE	Mix 5-10 tons of biochar per hectare into your soil
2. APPLY	Spread evenly before planting or during soil preparation
3. WAIT	Benefits develop over the growing season as soil improves

Your Farm. Your Planet.

Carbon Sequestration & Climate Action

Biochar locks away carbon in the soil for over 100 years, making it one of nature's most powerful tools against climate change.

Benefits:

- Reduces greenhouse gas emissions
- Improves soil carbon content
- Creates sustainable agriculture
- Earns carbon credits for your farm

Ready to Transform Your Soil?

Join thousands of Indian farmers improving their harvest and protecting their future.

✓ Increases crop yields	✓ Improves soil quality
✓ Reduces water needs	✓ Fights climate change
